

Creating a Movie Folder on C Drive

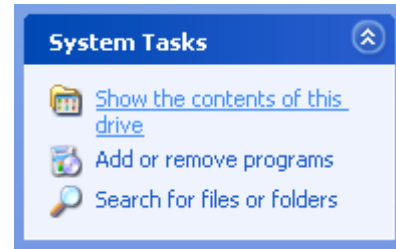

Brought to you by www.Free2DVD.com

This tutorial will help you make an easy to find location to save your movie files.

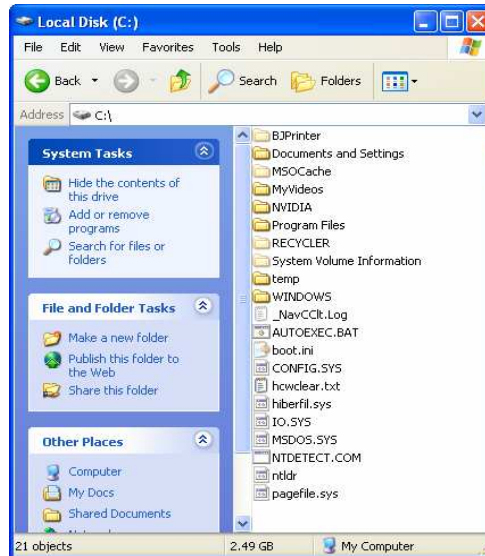

Open up My Computer, it is either located on your desktop or in your Start menu (click on Start at the bottom left of your screen).

Once that is open double-click on the C drive.

(Note: If the contents of the drive are hidden click the **Show the contents of the drive** button on the left – see pic).

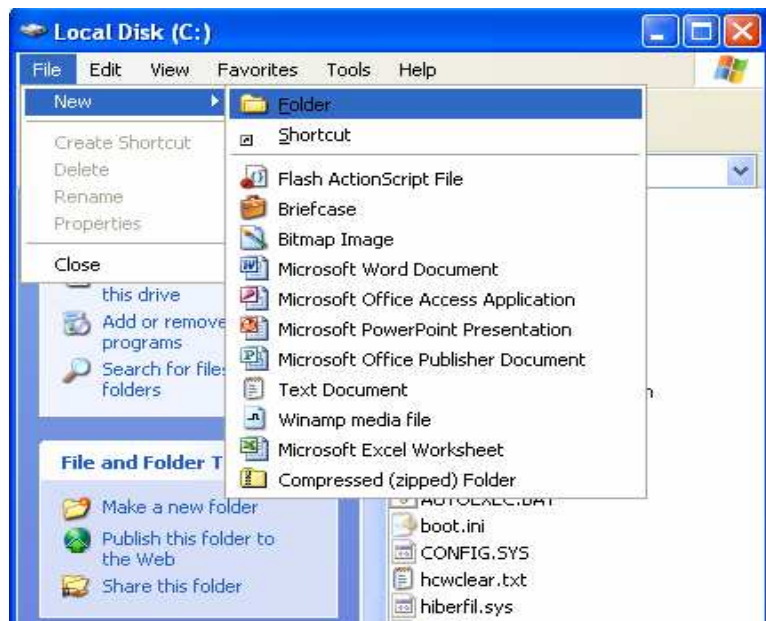

Your window should look something like this now (on the right).

In the upper left corner find **File** and click on it. In the drop-down menu you will see **New >**.

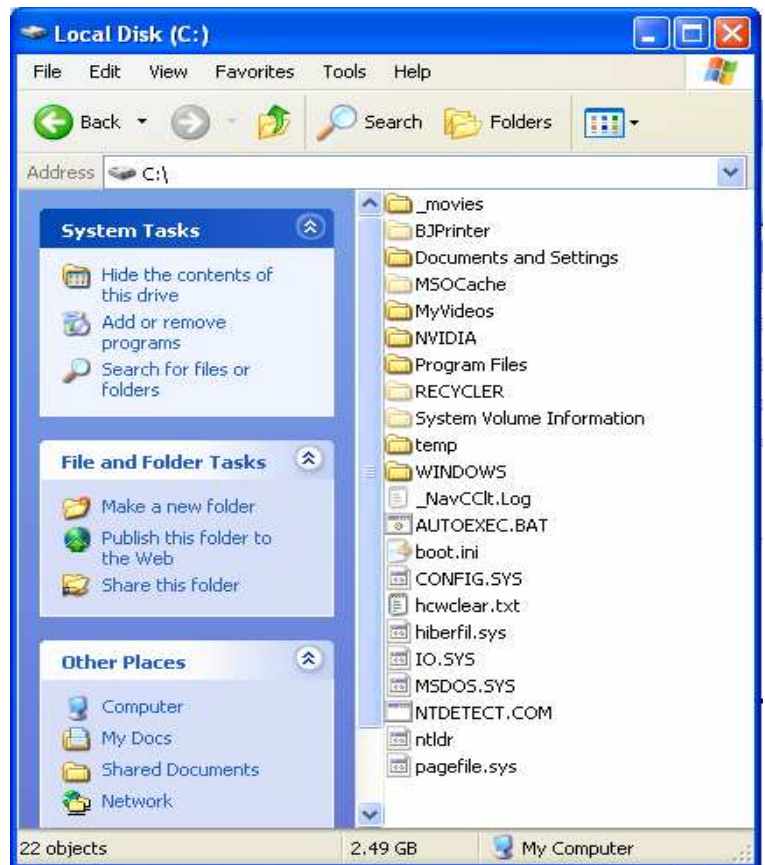

Mouse over that **New >** and you will see another menu.

In the menu click on **Folder** (see pic on the right).

This will create a folder named **New Folder**. Name this folder **_movies**.

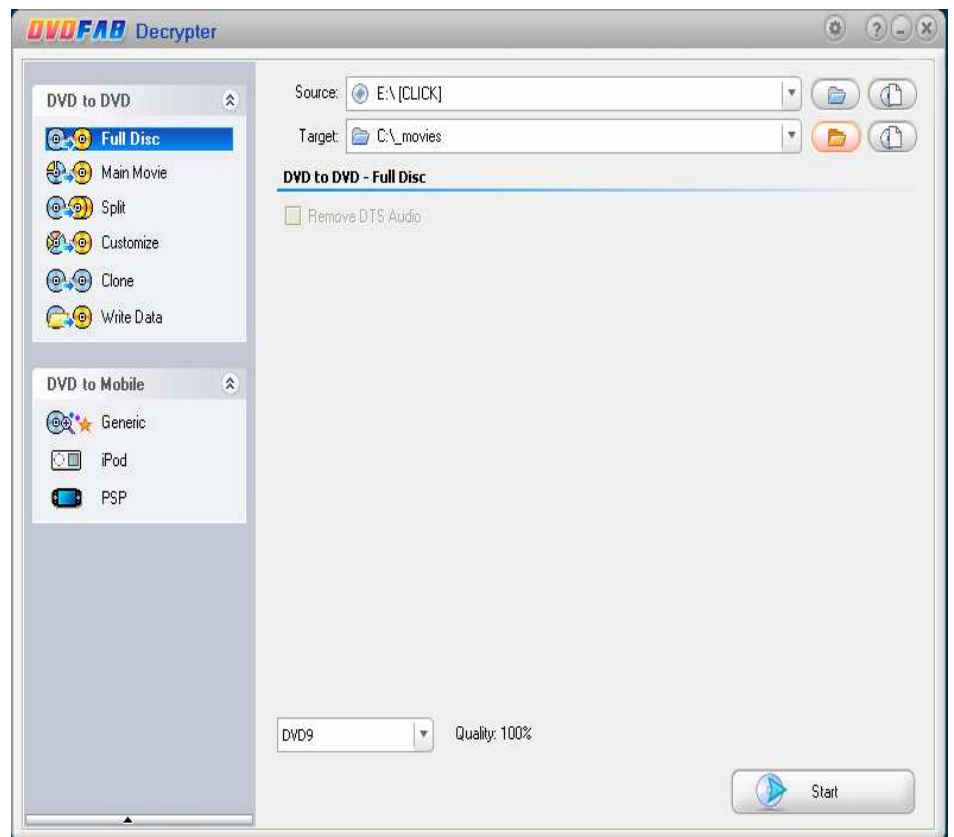

By using the underscore (hold down your shift key and press the – just to the right of the number 0) before the word movies it will put the folder at the top of the list on your C drive and make it very easy to find. (see picture on the right).

Click the button to the right of the Target area. It is a button with a little folder on it (it is highlighted in red in the image on the right).

Navigate to the newly created **_movies** folder on the C drive and choose it as your target.

DVD Fab Decrypter will put your movie in a folder within the **_movies** folder named **FullDisc** (see next page).

When DVDFab Decrypter is done ripping and decrypting the DVD movie files we need to open **DVD Shrink**.

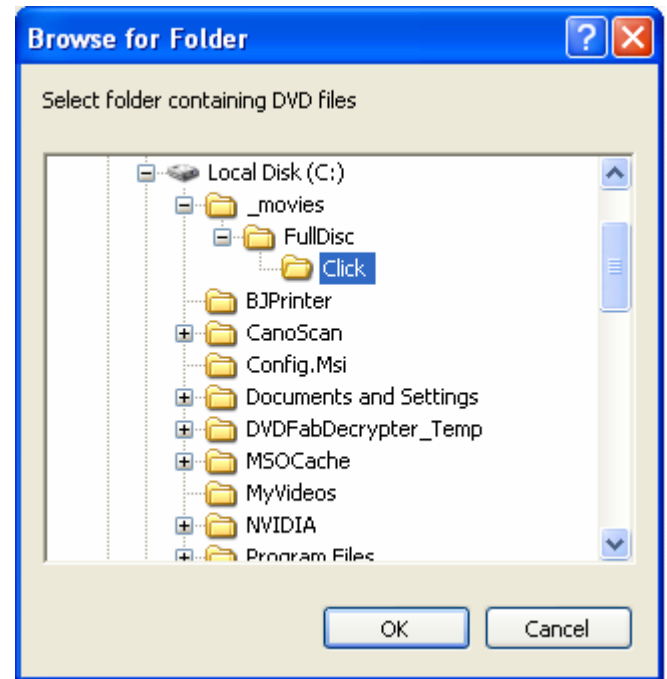

Click the **Open Files** button on **DVD Shrink** (it is located just to the right of the Open Disc button near the top left of the main window).

Now find the **_movies** folder we created earlier. The movie you decrypted and ripped with DVDFab Decrypter will be in the FullDisc folder.

Notice that we have to click on the FullDisc folder that DVDFab Decrypter created within the _movie folder and then click on the folder with the name of our movie. (see pic on right)

Now you can click the **OK** button.

DVD Shrink will now analyze the movie files.

You can now perform a Full Disc backup or a Re-author (step-by-step tutorials are available in the Step-by-Step Guides section of the Account Login area).
